Professional Summary

- Computer Science student at Wilfrid Laurier University with hands-on experience in backend development, software integration, and engineering automation. Experienced in building production systems and developer tooling using Go, Java, JavaScript, SQL, Linux, and CI/CD technologies. Skilled in standardizing development workflows, automating testing and deployment, and building reliable software systems. Seeking a New Graduate Software Developer opportunity where I can apply strong programming fundamentals to real-world products.

Wilfrid Laurier University

Bachelor of Science, Major in Computer Science

Waterloo, Ontario

Expected: May 2027

Work EXPERIENCE

Backend & Platform Engineering Intern

Guangzhou Baizhi Technology Co., Limited

Guangzhou, Guangdong

May – Aug 2026

- Standardized Jenkins CI/CD pipelines across 7 production repositories by designing reusable Jenkinsfile templates and shared libraries, ensuring consistent build, test, and code review stages across all services.
- Automated production deployment workflow including Go binary compilation, SCP artifact transfer, SSH remote execution, health checks, and automatic rollback on deployment failure.
- Built an AI-assisted code review system integrating Alibaba OpenCodeReview with DeepSeek API; designed automated severity classification (High/Medium/Low) that blocks high-risk pull requests before merge.
- Deployed Prometheus monitoring stack on Linux servers and designed Grafana dashboards for real-time observability of service health, latency, and error metrics.
- Developed end-to-end testing framework using Playwright, TypeScript, and Page Object Model pattern, automating 9 critical business flows with CI-integrated reporting.

Projects

Enterprise RAG Knowledge Base

Jul 2026

- **Tech Stack:** Go, MongoDB Atlas, Supabase, Anthropic Claude API, Replicate
- Designed and implemented a Retrieval-Augmented Generation platform integrating LLM APIs with enterprise knowledge retrieval; built document ingestion pipeline with chunking, embedding generation, and vector storage in MongoDB Atlas for semantic search.
- Implemented JWT-based authentication with role-based access control to enforce document-level security policies across multi-tenant knowledge bases.

Technical Skills

- **Languages:** Go, TypeScript, JavaScript, Python, Java, SQL
- **Backend:** Go(net/http), Node.js, Express, Koa2, REST APIs, JWT, WebSocket
- **Infrastructure:** Jenkins, CI/CD, Linux(Ubuntu), SSH, Nginx, PM2
- **Monitoring :** Prometheus, Grafana, pprof
- **Databases :** MySQL, MongoDB, PostgreSQL, Redis
